Abstract

This is a pandemic situation all over the world; all the scientists are beginning to recover from this virus disease. Several trials were done by them, several medicines are applied for curing the patients but some of them are successful to a small extent but moreover are failed in the first stage of trial. Here I discuss the success as well as failure of this journey.

Keywords: Covid-19 vaccines, Hydroxychloroquine for Covid-19 trails, Solidarity trails for Covid-19, Vaccine trailed for Covid-19.

It is an extremely poor situation all over the world during this COVID-19 pandemic situation. All the scientists and doctors are trying their best to discover the vaccine of the COVID-19 virus. There are several ways we got relief from this virus but not exactly the vaccine. Though modern science is very up to date after that, they have failed to eradicate this disease. There is a long history of developing the drugs applied for this viral disease. Sometimes we succeed to a small extent but sometimes we fail. Now we discuss the history of developing drugs for the purpose of COVID-19 viral disease. We see the large investments in antiviral drugs and vaccines for COVID-19 funded by both industry and governments. The first Covid19
